- Received 'Accolade Champagne' award for AVANTIX WEBTIS project. For year 2015
- Received 'Keystone' award for Lennon-PPH project for year 2011

### **Key Projects:**

- **WL MTS Envoy – Worked as a Test Lead**  
Envoy is a mobile application to run on Android platform on various devices for both on board and at station ticketing solution for various train operating companies in UK. It is a fully integrated and secure retail solution which provides complete national rail fares and timetables, issuing a comprehensive range of magnetically encoded tickets, including Rovers and Season tickets. This enables TOCs to improve revenue collection and on-train customer service through a reliable, proven solution from one of the UK's leading experts in transport and retail payment technology.
- **WebTIS – Web based Ticket Issuing system – Worked as Test Lead**  
Railways in UK are run by several private sector companies popularly called as TOC's (Train Operating Companies), WebTIS is an online ticketing solution which has several major TOCs as its client noticeable amongst them being the First Group, East Coast and the Southern Group. WebTIS serves numerous business requirements for its clients the most important amongst them are issuing tickets to the end clients via several modes of delivery running promotions and discounts.
- **AUP CTS: AtoS Unified Payment Card transaction Services – Worked as Test Lead**  
The AUP CTS is a SOA payments platform, providing a portfolio of PCI-DSS compliant payment processing and authorization services for integration with existing and future AtoS solutions. AtoS currently has several retail applications which have to adhere to the PCI DSS guidelines and individual audits have to be conducted for each application, with AUP replacing the payment page of each application there will be one application which will have to undergo the Audit related formalities.
- **Lennon Payment Processing Hub – Worked as Test Analyst**  
Lennon receives data from different Ticket Issuing Systems from across UK and then Lennon processes this data to apportion the revenues generated between different parties (Train Operating Companies) based on different business rules. For any ticket purchased using Credit/Debit cards. The credit/debit card number goes to the Lennon application with security code being masked; this was done with the intent of making the application PCI DSS compliant.
- **P&G Village Site development and Global Localizations – Worked Test Engineer**  
This is an ongoing development and maintenance project for P&G brand website. P&G needs to market their products through Digital internet Marketing. There are more than 15 websites of P&G for various brands that have been developed and maintained in this project. The work involves new website/internet site development, enhancing existing site, campaigns / promotions and localization of base sites in the form of big and small projects. This project contains different modules like registration, forums, blogs and users can interact with each other.
