Projects I have worked

• Health Care Monitoring Over IoT

Technology plays the major role in healthcare industry not only for sensory devices but also in communication, recording and display device. It is very important to monitor various medical parameters and post operational days. Hence the latest trend in Healthcare communication method using Internet of things (IoT) is adopted. IoT serves as a catalyst for the healthcare and plays prominent role in wide range of healthcare applications. This project addresses the medical applications of wireless networks in health monitoring systems. The main objective of our project is to make an intelligent health care monitoring system which facilitates continuous monitoring of the patients over internet.

• Automatic Rear view Mirror

An Automatic Rear View Mirror was developed to adjust view according to height of the driver. The system has ultrasonic sensor connected to a micro controller. The ultra-sonic sensor reads the height of the driver gives input to the micro controller and according to the program written the mirror will adjust itself.
